# Time is Money...

## How Profitable are Your Rotary Cutters?

“We were getting paid by the acre so we were always worried about production and cost per acre. We were having problems with competitive cutters. We tried the Schulte cutters and it didn’t take us long to figure out that it was the cutter we wanted. We didn’t realize how bad our previous cutters were until we put a Schulte on the ground.”

“We think the Schulte cuts better period. It’s unbelievable the quality of cut that we can get at what we would call a high rate of mowing speed. We get paid by the acre so productivity is a big deal for us, ground speed is a big deal for us.”

**Lot Maintenance Inc.**

“We’ve figured out when we look at the big picture, we go ahead and spend the money on the big tractors, and on the good cutters. By the end of the year we have recouped that investment several times over.”

“We don’t have to run a high RPM on the tractors, so I can get an extra year or two out of them. We run these cutters longer, we’re still using our first one which is over eight years old. When we do a per acre cost on equipment, there is just no comparison with the Schulte cutters to any one else, we’ve tried every one, we’ve tried them all.”
